Experience

Developer 2 Full Stack - MERN Feb 2022 – Jul 2026

Cloud Analogy CRM Specialist Pvt. Ltd

Reseller OS: AI-powered B2B sales automation platform (0 to 1) | **React 19/Next.js, Redux, TypeScript, Node/Express, LangChain, LLM, Azure, OpenAI APIs, SQL, DataDog**

- Built end-to-end ResellerOS, an AI-powered B2B sales automation platform, taking ownership across quotation, deal registration, and order workflows using Next.js, TypeScript, Node.js, PostgreSQL, Azure, and Salesforce integrations.
- Architected and engineered the core quote/deal-registration workflow, connecting Salesforce APIs with backend services and automating business processes, reducing manual processing by 35%.
- Built and integrated an LLM-powered form-automation workflow using OpenAI, LangChain, and **Electron.js**, automatically assisting users with repetitive form filling and **reducing manual effort by ~80%**.
- Designed and implemented scalable backend APIs using Node.js, Express.js, **Sequelize**, and **PostgreSQL**, supporting complex pricing, quotation, profitability, and order-processing workflows.
- Engineered asynchronous processing using Azure Service Bus, enabling reliable background workflows, decoupled services, retries, and better production resilience.
- Designed and implemented authentication and authorization using **JWT** and **RBAC**, securing business-critical reseller, deal, quotation, and order workflows.
- Built integrations between ResellerOS, Salesforce, and external services, owning the integration lifecycle from API design and data mapping to error handling and production debugging.
- Engineered **AI-assisted workflows** using LLMs and LangChain, exploring **automation** beyond conventional CRUD workflows and reducing repetitive operational tasks for users.
- Containerized and deployed services using **Docker** and Azure, contributing to **CI/CD**, production reliability, monitoring, and scalable application infrastructure.
- Optimized application and API performance through **caching**, database/query improvements, and architectural changes, contributing to approximately 40% improvement in API response time

CX Point: IVR / Customer Experience Platform | **Turborepo, Next.js 14, TypeScript, React Flow, D3.js, TailwindCSS, Microfrontends**

- Architected a Turborepo monorepo (2 Next.js 14 apps, 6 shared packages) serving 30,000+ products; 7 config-driven page templates cut build times 5x and bundle sizes 60%, generating 300+ SEO-ready, WCAG-accessible static pages
- Engineered Voyage's frontend within a **monorepo** + **microservices** architecture, building reusable Next.js/React modules for IVR discovery, file management, and complex call-flow workflows.
- Built a WYSIWYG IVR flow editor using React Flow, transforming VXML/SCXML definitions into interactive node-edge diagrams with custom nodes, edges, **dynamic styling**, and Dagre-based auto-layout.
- Designed reusable visualization and state-management layers using React Flow, D3.js, **Context API**, TypeScript, and TailwindCSS, supporting large and complex IVR configurations.
- Integrated CSV, VXML/SCXML, and WAV upload workflows with backend microservices and optimized frontend interactions, contributing to 20% faster IVR response and 15% lower call handling time.

Fantasy7: **React, Next.js, TypeScript, Zustand, TanStack Query, Node.js, Express.js, Betfair APIs**

- Built **end-to-end** the frontend for a real-time betting platform integrating **Betfair APIs**, using React, Next.js, TypeScript, Zustand, and TanStack Query.
- Engineered high-frequency market-data synchronization handling approximately **1,200 updates/sec** with sub-**0.05s bet-update latency**.
- Designed and implemented real-time state management and data-fetching architecture using **Zustand + TanStack Query**, minimizing unnecessary renders while keeping betting markets synchronized.
- Integrated and **optimized** betting workflows across React/Next.js and Node.js/Express APIs, with **90%+ test coverage** using Jest across critical user and betting flows.

Safeguard Global: Global Workforce Platform | **React, Gatsby.js, TypeScript, GraphQL, Contentful CMS/API, TailwindCSS**

- Engineered production frontend experiences for Safeguard Global, building scalable React/Gatsby.js pages and reusable components for a platform serving 1,500+ clients.
- Built a content-driven frontend architecture integrating Contentful CMS, GraphQL, and React, enabling teams to manage and publish enterprise content with reduced engineering dependency.
- Designed and implemented reusable, **responsive UI** components using React, TypeScript, and TailwindCSS, translating product designs into production-ready experiences.
- Optimized Gatsby.js rendering, asset delivery, and **frontend performance**, achieving approximately **35% faster** page loads and a 20% improvement in user engagement.

- Engineered GraphQL-based data-fetching and Contentful **integrations**, improving data delivery and reducing unnecessary frontend **API** overhead.
- Built and streamlined content publishing workflows, reducing manual content-update effort by **approximately 40%** while improving consistency across pages.
- Integrated marketing and lead-generation workflows with Pardot, connecting the website experience with downstream marketing processes.

Google Sheets Automation and Web Developer Intern, Jul 2021 – Dec 2021

DigiGrowHub

HR Lead Automation System: Google Apps Script, Google Sheets, Google Forms, Google Docs, PHP, WordPress

- Built end-to-end an automated HR lead-management system using Google Apps Script and Google Workspace, reducing approximately **80% of manual HR work**.
- **Engineered** automated lead capture from Google Forms into Google Sheets, followed by **100% validation and document generation/sharing**.
- Designed a zero-manual-intervention workflow connecting Forms, Sheets, and Docs, improving processing speed and accuracy.
- Developed supporting interfaces using **PHP, HTML, CSS, and WordPress**, integrating the automation with the existing organization workflow.

Technical Skills

AI/LLM Exposure: LangChain, LLM, Generative AI, OpenAI APIs, Claude Code, Cursor, Codex
Frontend: TypeScript, JavaScript (ES6+), React 19, Next.js 14, React Router 7, Vite, Tailwind CSS 4, ProseMirror/Tiptap, Framer Motion, SSE/WebSockets, Web Performance (Core Web Vitals, Lighthouse), Charts.js, D3.js, Context API, Webpack, Babel, Electron.js, Redux
Backend: Node.js, Express.js, RESTful APIs, GraphQL, Web Services, OAuth, JSON Web Token, Auth2, Next Auth, Mongo DB (NoSQL), Sequelize, CMS, PostgreSQL, Redis, REST APIs
Cloud & DevOps: AWS (ECS, EC2, ECR, S3, Lambda), Azure(Static App, Key Vault, Storage, Service Bus, ADI), Docker, nginx, Modal, GitHub Actions, CI/CD
Testing & Observability: Playwright, Vitest, Jest, Datadog, TDD, Unit Testing
Version Control & Tools: GitHub, Postman, VS Code
Computer Science Fundamentals: Data structures, Algorithms, Design patterns, SOLID Principles

Education

Sanskriti University, August 2018 – July 2022

B.Tech Computer Science and Engineering | CGPA: 8.09
